

**Title:** PlanIt

**Description:** With the PlanIt app we want the users to be able to add task they need to complete. They can even create projects to group certain tasks. Multiple users can contribute on those projects. You can add predefined or self-created tags to task and projects to highlight priority, type, etc

## User Stories:

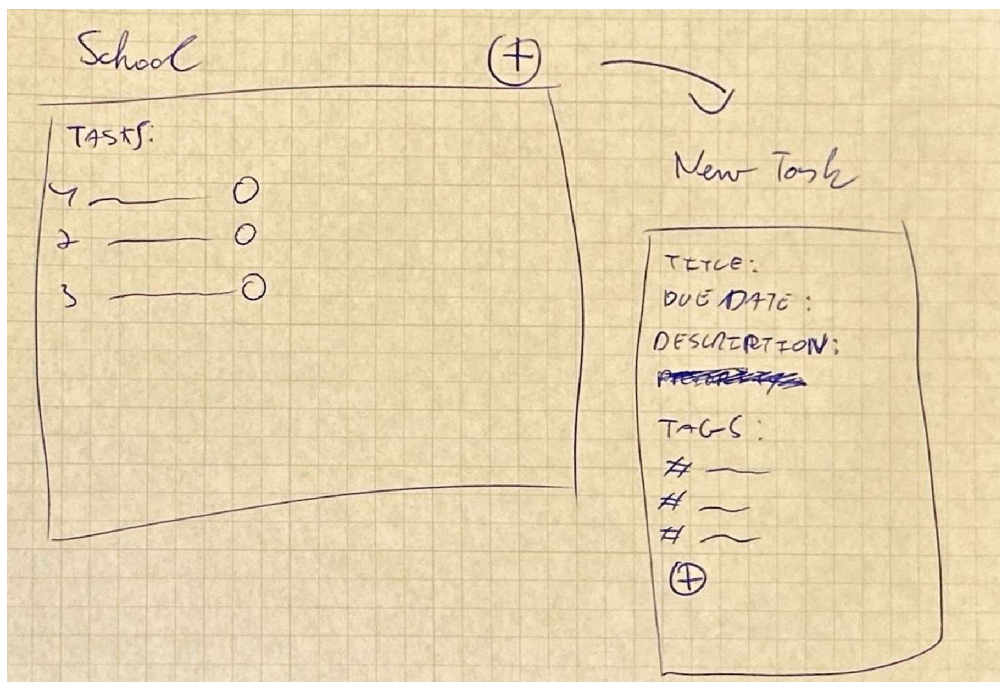

### 1. Create tasks:

As a user

I can create a task

so that I can track the status of that task

Wireframe:

Acceptance criteria:

- User can add task to project
- User can define details of task

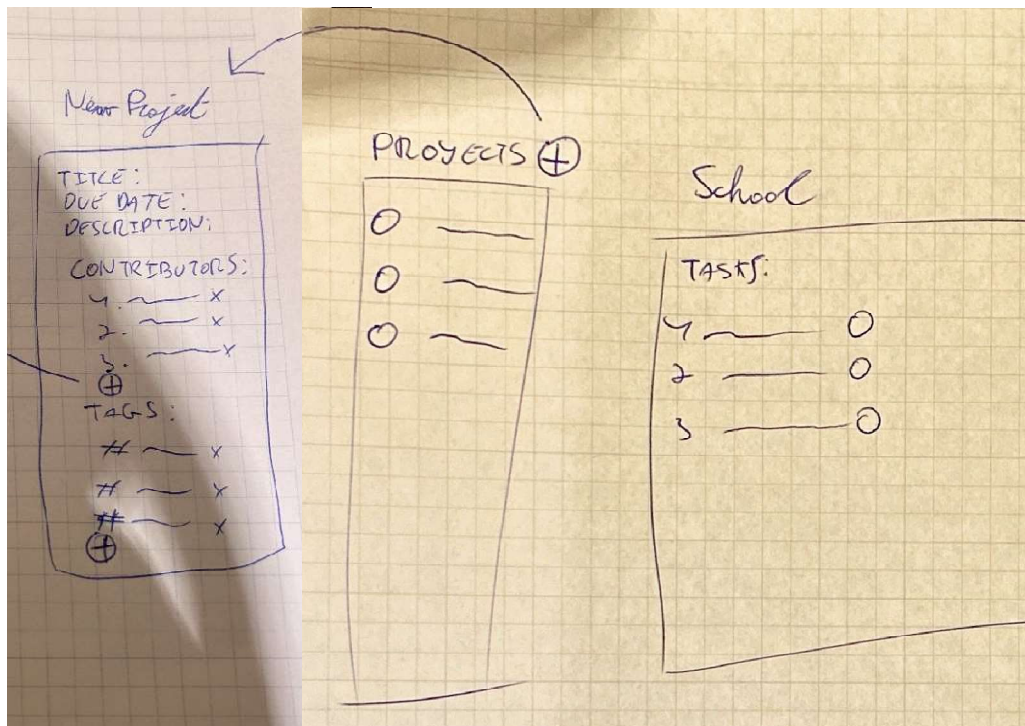

### 2. Create project:

As a user

I can create a project

So that I can group tasks

Wireframe:

Acceptance criteria:

- User can create new project
- User can define details of project

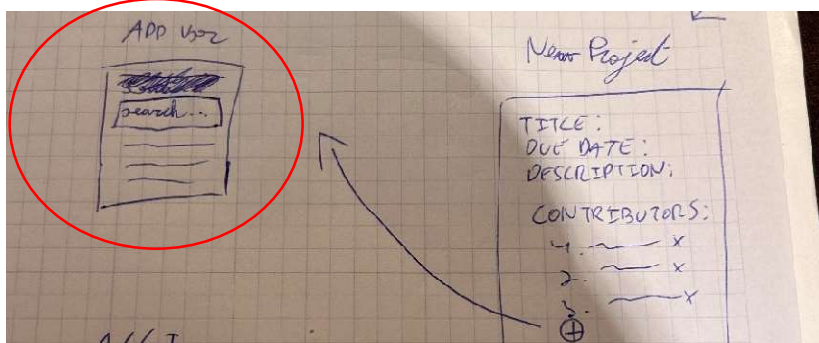

### 3. Add user to project:

As a user

I can add and remove users to a project

So that only users working on that team have access to project

Wireframe:

Acceptance criteria:

- User can add other users to project

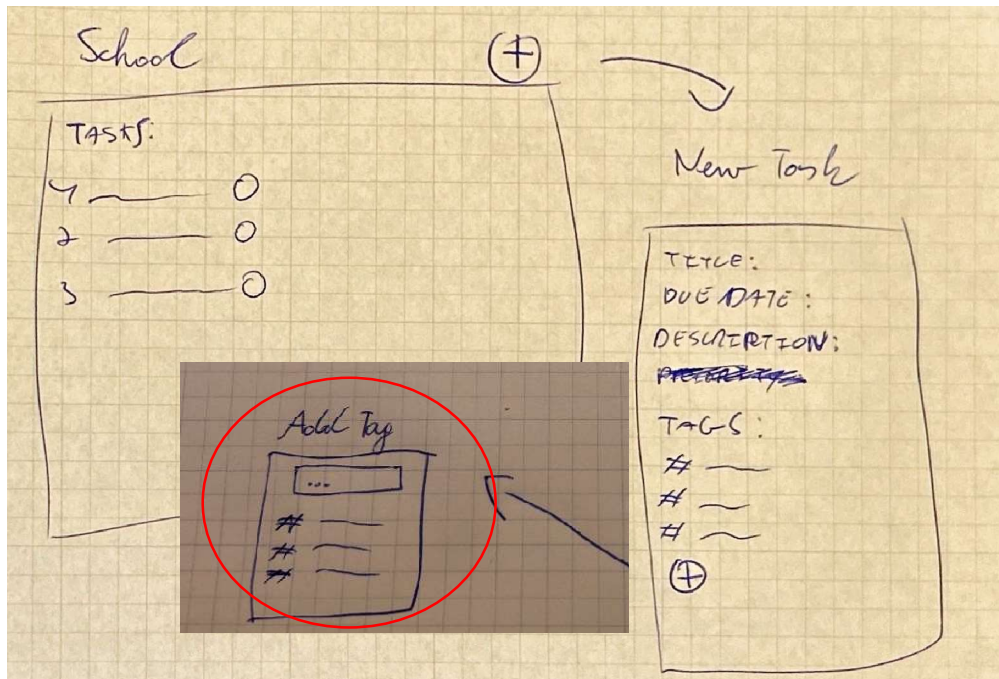

#### 4. Create Tag and Add to Task:

As a user

I can create and add tags

So that I can quickly see some details of task

Wireframe:

Acceptance criteria:

- User can add new or existing tags to project

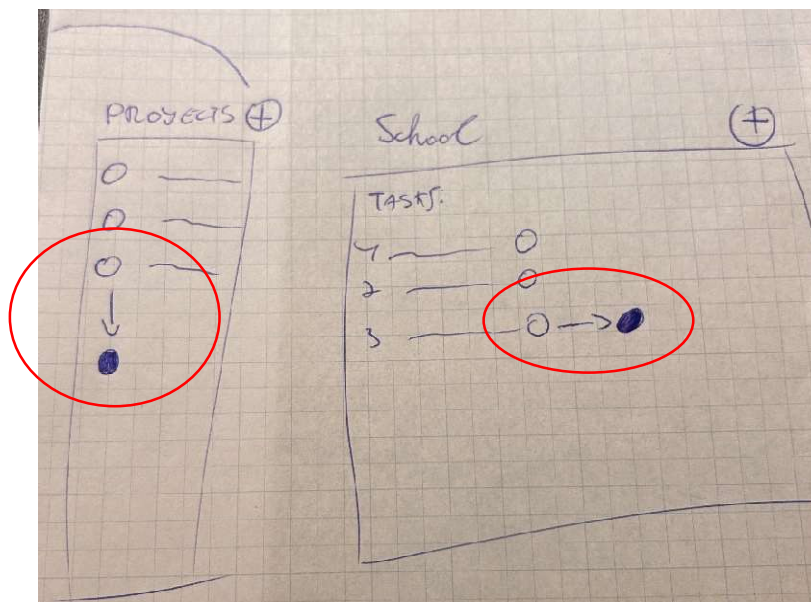

#### 5. Mark task/project as done/not done:

As a user

I can mark a task as done/not done

So that I can track the progress of the task

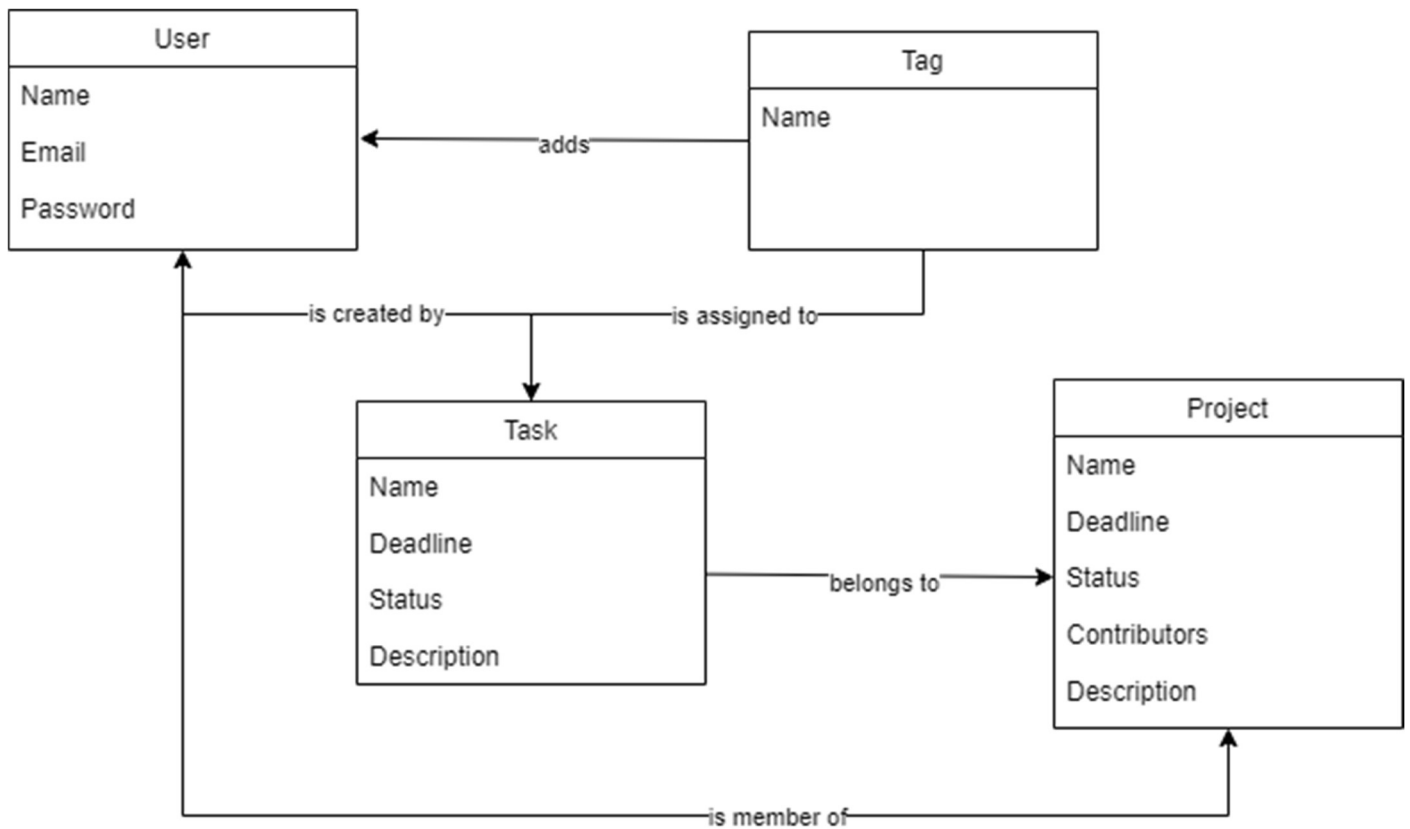

Wireframe:

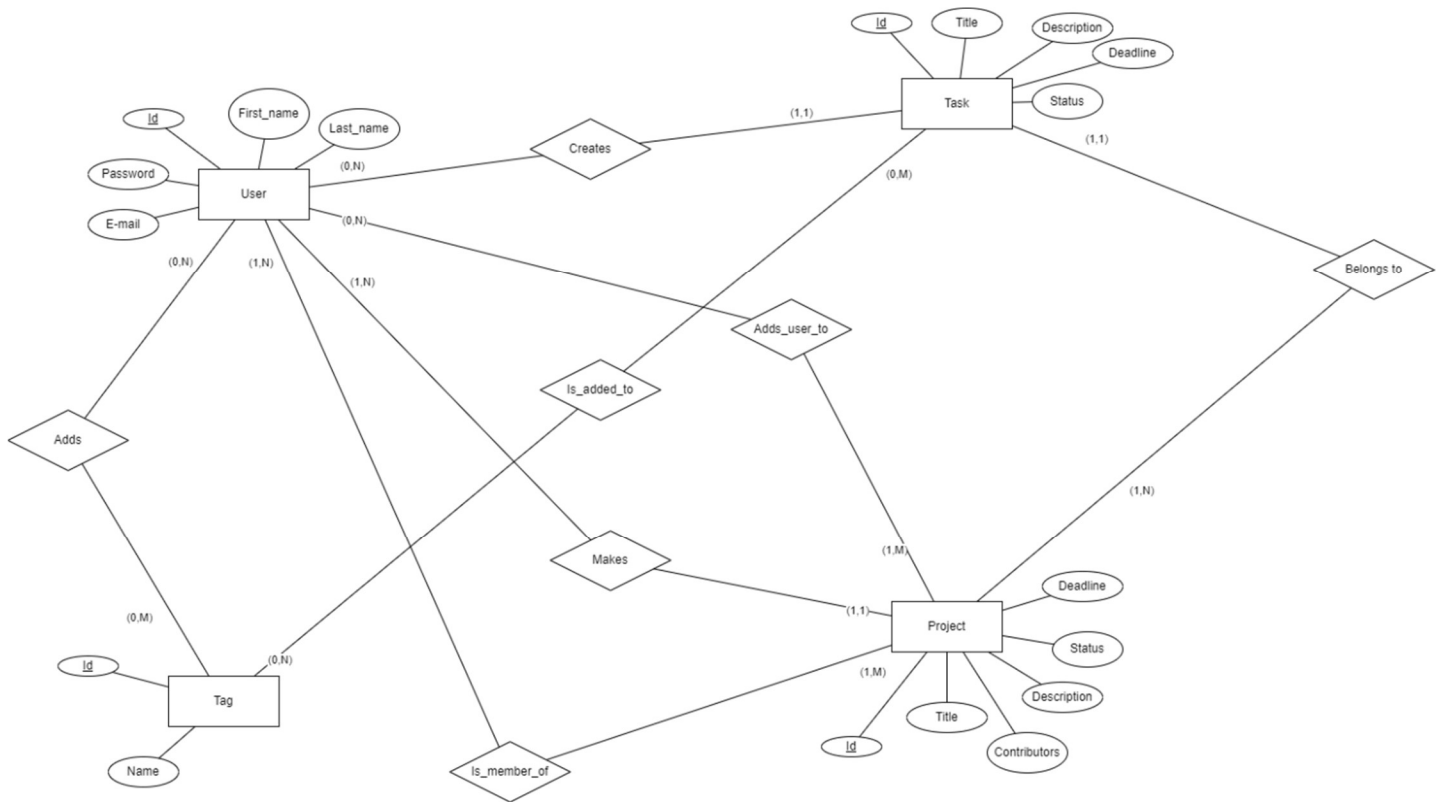

Acceptance criteria:

- User can mark task/projects as done or not done
